

Science @ St. Mary's Catholic School

Pre-K through 8th grade students at St. Mary's receive a thorough, lab intensive science education with the LabLearner program. The students become immersed in the process of Science; thinking the way scientists do— using equipment such as triple beam balances and spectrophotometers in the upper grades. From balancing objects in Pre-K, extracting DNA from an onion in 5th grade to creating a magnet using electricity in the 8th grade. The experiments lead to the discovery of a new science concept each week. LabLearner also incorporates the practice of Math, Reading and Writing skills.
